Formal definition of RoR2Cheats console commands

Guido "Harbingerofme"

October 26, 2019

Preface

If you ever wanted a more boring definition of all the commands in ror2cheats, I got you covered. This file should hopefully be completely pointless as we strive to be clear in our descriptions. Nonetheless, here it is.

1 Syntax

$$
\begin{aligned}
command ::=\ &name\quad/\quad name\ argument \\
name ::=\ &\textbf{uncapitalised freeform text} \\
argument ::=\ &requiredArgument\ argument\quad/\quad optionalArgument\ optionalArgument \\
&/\quad optionalArgument\quad/\quad requiredArgument \\
requiredArgument ::=\ &\{argumentInside\}\quad/\quad\{name = argumentInside\} \\
optionalArgument ::=\ &[argumentInside]\quad/\quad[name = argumentInside] \\
argumentInside ::=\ &choice\quad/\quad type\quad/\quad evaluated \\
argumentOrValue ::=\ &requiredArgument\quad/\quad optionalArgument\quad/\quad value \\
value ::=\ &number\quad/\quad freeform \\
choice ::=\ &(insidechoice)\quad/\quad value(insidechoice) \\
insidechoice ::=\ &argumentOrValue\quad/\quad insidechoice\mid insidechoice \\
type ::=\ &\textbf{Capitalised freeform text}\quad/\quad\textbf{Capitalised freeform text}: value \\
evaluated ::=\ &*\textbf{ uncapitalised descriptive freeform text} \\
&/\quad*\textbf{ uncapitalised descriptive freeform text}: value \\
number ::=\ &\texttt{literally a number} \\
freeform ::=\ &"\textbf{text}"
\end{aligned}
$$

While ideally, I'd walk though each line and explain, I hope the dictionary provides the meaning it can.
